

# AIM TECHNICAL BULLETIN

---

Bulletin Number: 08242009-003

Please note: FLUSH WALL PANELS

AIM Flush Wall Panels may be installed on open framing or over solid substrate both vertically and horizontally. However, prior to installing as a FLUSH WALL panel, you must check with AIM engineering for proper wind loading to avoid deflection and moisture migration.

The wind loads will mandate the method of installation required to meet all wind loads. Do not proceed to install the panel without confirmation of the proper design and installation requirements.
